

LINE UP

Level	1 (Age group 6 – 7)
Resources Required	Paper (To make paper flip strips) Pencil Tape (or a similar adhesive)
Alternate Options for the Resources	None
Strand Covered	Number and Operations
Targeted Skills	Reading numbers, ordering numbers
Inspired by	Third Space Learning
Time Required	10 minutes for set up 15 minutes for the game
Previous Learning Required	Numbers from 1-20
Support Required	Medium support

Rules of the Game:

Goal	The team who correctly orders themselves first, wins
Rules	Divide the players into 2 groups Each player can only be told their number once
Steps	Step 1: On pieces of paper the size of your palm, write two groups of consecutive numbers below 20 (the number of papers should equal the number of players in each group) Step 2: Using tape, paste the pieces of paper onto each player's back (the players should not be aware of their own number) Step 3: The players read out loud each other's' number once within their group Step 4: Based on the numbers in the group, the players should order themselves in numerical order Step 5: The first group to correctly order themselves, wins
Images or Illustrations	None
Variations of the Game	Instead of consecutive numbers, the players can be given numbers that skip 2 or 3. So they would have to order themselves in multiples of 2 or 3 Instead of ascending order, the players are required to order themselves in descending order

	The number range can be increased from 1-50
Enrichment	For some geometry practice, ask students to organize along a line or along different shapes
Simplification	If the player needs to be told their number more than once, other players are allowed to remind them Instead of 1-20 the range can be 1-10
